## US Solar Heat Makes Solar Heating Even More Affordable

Imagine how much money you could save by turning off or lowering your thermostat during the day. In times like these that is what many do before leaving for work in the morning, coming home to a cold house in exchange for reduced heating bills. For some this is not an option if there are family members, or even pets in the house during the day. Furthermore, the increasingly popular work from home scenario means you have to keep your home heated all day, unless you plan on wearing a hat and gloves while typing your emails and updating your company blog. The financial crunch may discourage you from improving your home's energy economy. That's why US Solar Heating has been working to get free heating into your home with an affordable investment that will cost pennies on the dollar as it heats your home season after season.

With panels from US Solar Heating you can invest to cut your heating bill while keeping your home warm. Of course not all of us are ready to make much of an investment at all right now. Thankfully, US Solar Heating is not letting that be a reason to keep the power of solar heaters out of our home. An entire line of smaller, lighter, and portable solar heating panels have been introduced to US Solar Heating's line of products.

US Solar Heating now has two options to heat any space with a southern facing window. The [Outdoor Unit](#) is a solar heating panel that sits on a windowsill and is held in place by shutting the window, much like a window air conditioning unit. If you don't have this type of window the Indoor Unit is your solution. The [Indoor Unit](#) sits on the windowsill and collects the sun rays that pass through the glass. Both of these solar air heaters are powered by the same fan and include internal thermostats.

Perhaps you are not familiar with the effectiveness of solar heating. In that case, US Solar Heating has just the product for you. The sampler panel is a miniature version of the indoor window unit. At under \$150 it is the most affordable way to bring solar heat from US Solar Heating into your home. Small enough to fit in just about any window space (southern facing) while the sun is shining the sampler panel will keep a room warmer all day long.

For more information on cost and incentives visit the company's website at [ussolarheating.com](http://ussolarheating.com) or call 866-361-2638.

US Solar Heating provides affordable and easy to install solar air heater panels. Wall and roof installation options are available and all the products are made in the USA. We ship factory direct to anywhere in the US and Canada.
